Agenda

This workshop will present updated strategies in the 2016 Plan update draft, with time for stakeholder input on the updates. Stakeholders are also welcome to comment and provide recommendations on other strategies that were not updated in the Plan update draft.

Background

In late 2015, the Energy Commission adopted the Existing Buildings Energy Efficiency Action Plan (Plan), a comprehensive set of strategies to scale energy efficiency in California's existing building stock over the next decade. A few months later, legislation passed that adds significant state policy support for the Plan goals and objectives.

SB 350 (De Leon, Chapter 547, Chapter, Statutes of 2015) directs the Energy Commission to further its efforts to scale energy efficiency by setting statewide energy savings targets to achieve a doubling of current energy efficiency efforts by 2030. SB 350 also directs the Energy Commission to update the Plan by January 1, 2017, and every three years thereafter.

AB 802 (Williams, Chapter 590, Statues of 2015) directs the Energy Commission to establish a first of its kind statewide building energy use benchmarking and public disclosure program. AB 802 also directs the California Public Utilities Commission to consider expanding efficiency program assistance to bring older buildings and energy systems up to current code requirements and to pilot meter-based savings regimes within the Investor owned utilities ratepayer funded efficiency programs.

This Plan update provides status reports on current energy efficiency strategies,

modifies a few strategies to better reflect industry needs, and expands select strategies to align with the new legislative directives.
